

INTRODUCTION

Mainly utilised in conjunction with either driven or bored piles, reinforced concrete foundations can be constructed quickly and efficiently so that the superstructure works can be installed to a tight programme.

R.C. OPTIONS

Rafts

Ground Beams

Suspended Slabs – Domestic / Commercial / Industrial

Retaining Walls

INSTALLATION

Installed with teams of upto 4 operatives, all reinforcement is delivered to site pre-fabricated and easily and quickly installed to the specific design requirements.

ADVANTAGES

- I) Cost effective foundations when combined with piles
- II) High load capability
- III) Fast, effective solution especially on restricted / bespoke contracts
- IV) Guaranteed works
